

Driving Agri-Recycling with Tech: Myplaas Collection Booking Platform

What We Do

To support responsible plastic recycling in South Africa's agricultural sector, Myplas launched Myplaas, a digital collection booking platform designed specifically for farms. Developed to help farmers comply with Croplife standards and Global GAP audits, the platform simplifies the collection of common agricultural plastics — such as HDPE drums, irrigation pipes, and plastic crates — ensuring they are collected efficiently and recycled responsibly by Myplas. Starting in the Western Cape, Myplaas provides farmers with full compliance documentation to meet audit and traceability requirements, aligning with best environmental practices.

Our Impact

- **Simplified Collection & Logistics:** Farmers can request pickups online, removing logistical barriers, especially for remote areas. This structured, auditable system replaces informal collection methods, ensuring consistent and efficient recycling across the agricultural sector.
- **Compliance Documentation for Audits:** The platform generates all required paperwork automatically, including weighbridge slips, Certificates of Responsible Recycling, and CropLife South Africa-aligned documentation for agrochemical containers. This ensures farms meet sustainability and audit standards seamlessly.
- **Promoting Agricultural Sustainability:** Myplaas supports initiatives such as CropLife's container management programme and GlobalG.A.P. environmental indicators. By closing the loop on farm plastics, it helps prevent illegal dumping or burning while allowing farmers to demonstrate environmental accountability to buyers and stakeholders.
- **Scalable, Tech-Enabled Circular Economy** Myplaas highlights Myplas's commitment to digital innovation. Myplas is Africa's only recycling company that practices drum-to-drum recycling—a fully circular, 100% sustainable model. We leverage our collection platform to scale this impact even further, with potential to expand into nurseries, packhouses, and cooperatives.

A Win-Win

By combining digital technology with recycling expertise, Myplas empowers farmers to achieve compliance, improve sustainability, and integrate into the circular economy. Myplaas aligns directly with South Africa's Extended Producer Responsibility framework and the National Waste Management Strategy, reinforcing Myplas's leadership in agricultural recycling innovation.

**Smart tech for smarter recycling.
Driving sustainability.
From farm to future.**
